

How to run the project

Sun, poora project ready hai. Tere ko bas isko chalana hai aur agar internship mein koi bole to basic idea samajhna hai. Tension lene ki zarurat nahi hai. Maine sab step by step likh diya hai. Kuch samajh na aaye to mujhe message kar dena, khud se files delete ya idhar-udhar mat karna.

STEP 1 - Project Download Karna

GitHub link open karna.

Green **Code** button dabana.

Download ZIP karna.

ZIP download ho jaye to usko extract kar lena.

Uske baad ek folder banega:

```
Movie-Recommendation-System
```

Us folder ko Desktop par rakh dena.

STEP 2 - CMD Kholna

Sabse easy tareeka:

1. Project folder open karo.
2. Upar address bar par click karo.
3. Waha likho: **cmd**
4. Enter daba do.

CMD wahi folder mein khul jayega.

Agar niche jaisa dikh raha hai:

```
C:\Users\YourName\Desktop\Movie-Recommendation-System>
```

to sab sahi hai.

STEP 3 - Python Installed Hai Ya Nahi

Yeh command copy-paste karna:

```
python --version
```

Agar output aaye:

```
Python 3.13.x
```

to sab sahi hai.

Agar error aaye:

```
python is not recognized
```

to mujhe screenshot bhejna.

STEP 4 - Required Libraries Install Karna

Yeh command copy-paste karna:

```
pip install -r requirements.txt
```

Isme 2-5 minute lag sakte hain.

Internet on hona chahiye.

Yeh sirf ek baar karna hai.

Agar pehle se install hai to dobara karne ki zarurat nahi hai.

STEP 5 - Project Run Karna

Yeh command copy-paste karna:

```
python run.py
```

Ab thoda wait karna.

Loading mein kuch seconds lag sakte hain.

Mera laptop bhi kabhi kabhi 10-15 second leta hai, especially battery low ho to.

Isliye agar thoda time lage to tension mat lena.

STEP 6 - Jab Yeh Screen Dikhe

```
=====
MOVIE RECOMMENDATION SYSTEM
=====

Loading recommendation model...
Model loaded successfully.

Enter Movie Name (or 'exit'):
```

to ab movie ka naam likhna hai.

Example:

Avatar

ya

Batman

ya

Inception

aur Enter daba dena.

STEP 7 - Output Kya Aayega

Project yeh batayega:

- Input movie ka naam
- Uska genre
- Uski rating
- Uske similar 5 movies
- Similarity score

Example:

Title : Avatar
Genre : Action, Adventure, Fantasy
Rating : 7.2

TOP 5 RECOMMENDATIONS

1. Aliens
2. Falcon Rising
3. Battle: Los Angeles
4. Aliens vs Predator: Requiem
5. Apollo 18

STEP 8 - Agar Movie Not Found Aaye

Agar yeh aaye:

Movie not found.

matlab:

- spelling galat hai
- ya movie dataset mein nahi hai.

Example:

Inception

sahi hai.

Lekin:

Incepton

galat spelling hai.

STEP 9 - Dusri Movie Search Karni Ho

Bas fir se movie ka naam likh dena.

Example:

```
Interstellar
```

Program band nahi karna padega.

Jitni movies dekhni ho dekh sakti ho.

STEP 10 - Program Band Karna

Yeh likhna:

```
exit
```

aur Enter daba dena.

Ya CMD ka cross button daba dena.

STEP 11 - Agar Error Aa Jaye

Kuch bhi khud se mat karna.

Na file delete karna.

Na folder move karna.

Na code edit karna.

Bas:

1. Screenshot bhejna.
2. Ya pura error copy karke bhejna.

Main dekh lunga.

Internship Mein Agar Koi Puche Ki Project Kya Karta Hai

Bol dena:

This is a Content-Based Movie Recommendation System. It recommends similar movies using genres, keywords, cast, director, and movie overview. Two machine learning approaches have been implemented: CountVectorizer and TF-IDF, and their performance has been compared.

Bas itna bolna kaafi hai.

Important Commands

Libraries install karne ke liye:

```
pip install -r requirements.txt
```

Project chalane ke liye:

```
python run.py
```

Python check karne ke liye:

```
python --version
```

Program band karne ke liye:

```
exit
```

Bas itna hi. Agar kuch bhi samajh na aaye to mujhe puch lena. Khud se experiment mat karna warna phir mujhe GitHub se project rescue karna padega. 😊
